Art Unit: 3729

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japan Pat No 01-274440, by Keiki; hereinafter '440.

The '440 teaches a method of wire bonding wherein a vacuum is applied onto a porous surface of a part which supports a lead frame. This is done to suppress warping while a wire bonding step is used to bond chips to the lead frame. If the '440 does not anticipate Applicants' claimed invention it is held to have made the claimed invention obvious. That is the base tape recited in Claim 11 of the instant application is deemed to be an equivalent of the element 5 taught by the '440. As further applied to claims 12, 16 and 17 it is held that these numerical values would be within the ordinary skill of an artisan at the time the invention was filed. Alternatively these same limitations are held to be mere design choice inasmuch as Applicant solve no specific problem not provide any specific purpose therefore.
